

NOTE TAKING – JOURNALING

Participative learning at S.P.B. Patel Engineering College emphasizes the crucial role of note-taking and journaling in fostering active engagement and deeper understanding among students. Encouraging students to take detailed notes during lectures and discussions serves as a catalyst for critical thinking and knowledge retention. These notes not only capture key concepts but also encourage students to reflect on their understanding and connect new information with prior knowledge. Additionally, journaling provides students with a platform to express their thoughts, insights, and questions, promoting self-reflection and metacognitive awareness. By integrating note-taking and journaling into the learning process, S.P.B. Patel Engineering College empowers students to take ownership of their learning journey, fostering a culture of collaboration, curiosity, and lifelong learning.
